Customer Reviews

This book will get any media specialist ready for the important changes in cataloging. I took the course in the 90's but so much has changed and this book truly gets you ready for the world of automation and technology in the 21st century.Arlene G. Taylor is very detailed and knows her craft!Lynn M. DixonChicago Public Schools

This was a very in-depth book, I would think targeted to a Library Science major in college. It covered many different kinds of classifications, while I was interested only in Dewey, so it was not as useful to me.

This is great resource, but it is out of date. It is nearly ten years old and, therefore, doesn't cover RDA, FRBR, or the myriad recent changes. There is, however, a new edition of this book (published in 2015) that is up to date Introduction to Cataloging and Classification (Library and Information

Science Text).

I found this book extremely helpful while obtaining my MLIS. There are plenty examples- and it comes with a CD for further assistance. Please note though that this is more of a guide book. It does not do the cataloging and classification for you.:Update:I will continue to say that this book is still helpful. While my job does not entail cataloging, it allows me to know when a mistake is made and a record needs to be updated. I would recommend this book to anyone interested in LIS.

Great resource. Much more functional than many of the texts I used in library school.

I needed it for my masters program. I really liked Cataloging, so, I am keeping this one as reference.

This answered so many cataloging questions for me. Thanks.
